

Cloud Based Remote Productions

COVID-19 has given a huge boost to cloud-based remote production. More and more TV production companies rely on virtual OB vans and perform the image mixing online. So it is only logical that the video playout system is also located in the cloud. PLAYDECK is equipped with NDI inputs and outputs and thus integrates into almost every modern broadcast environment.

PLAYDECK runs smoothly on Amazon EC2 Systems and thus offers a wide range of possible applications.
